Section 2

MERITOR WABCO HYDRAULICS ABS (H-ABS)

Overview

Meritor WABCO Hydraulic Anti-lock Braking System (ABS) is an electronic wheel speed monitoring and control system used on medium-duty trucks, buses and motor home chassis equipped with a hydraulic brake system.

How Hydraulic ABS Works

ABS wheel sensors detect wheel speeds. The sensors generate signals that are transmitted to an Electronic Control Unit (ECU). If the wheels start to lock, the ECU signals the modulator assembly, a control valve assembly, to regulate the brake pressure of each locking wheel.

During an ABS stop, a solenoid valve in the modulator assembly is rapidly pulsed; that is, it opens and closes several times to control the brake pressure. When this occurs, drivers may notice a pulsating of the brake pedal.

An ABS indicator lamp on the vehicle dash alerts the driver to a possible system fault and provides blink code information to diagnose the system.

NOTE:
If the ABS indicator lamp comes on during normal vehicle operation, drivers may complete their trip, but are instructed to have their vehicles serviced as soon as possible.

In the unlikely event of an ABS system malfunction, the ABS in the affected wheel will be disabled and will return to normal braking. The other sensed wheels will retain their ABS function.

OEM modulator assemblies are sold with dry modulator valves. For aftermarket, Meritor WABCO sells only wet modulator valves (valves pre-filled with brake fluid). To help you identify the proper replacement parts, we have included the OEM part numbers. OEM Dry modulator valve assemblies are listed WITHOUT the S suffix.

NOTE: If the number of the valve you are replacing is for a dry valve, the ArvinMeritor customer service representative will provide the correct WET valve in its place.

HYDRAULIC POWER BRAKE (HPB) COMPONENTS

Overview

Meritor WABCO's Hydraulic Power Brake (HPB) is a braking and vehicle control system for Business Class trucks, Classes 4 through 7, and buses that are equipped with hydraulic brakes. The HPB system provides the following functions.

- Full power brake performance
- Brake control functions including Anti-Lock Braking System (ABS), Automatic Traction Control (ATC) and Electronic Brake force Distribution (EBD)
- Optional parking brake control

System Components

The HPB system consists of two main components — the Hydraulic Compact Unit (HCU) and a dual circuit master cylinder. The HPB system is also available with an optional parking brake pressure supply valve. Figure 1.1, Figure 1.2 and Figure 1.3.

HCU WITHOUT OPTIONAL POWER PARKING BRAKE SUPPLY VALVE

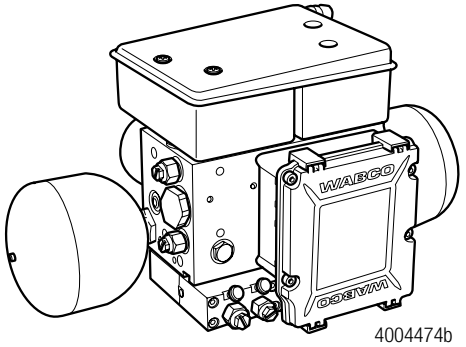

Figure 1.1

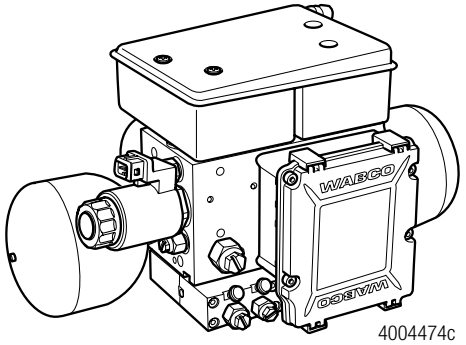

Figure 1.2

MASTER CYLINDER ASSEMBLY

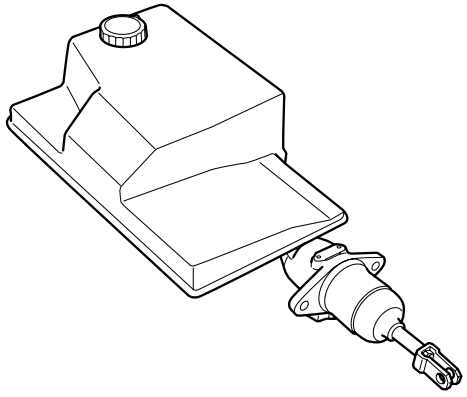

Figure 1.3

Hydraulic Compact Unit

The HCU consists of an electronic control unit, two independent electric motors driving two pump systems, two accumulators, a dual circuit fluid reservoir with integrated filters, pressure relief valves, solenoid valves and a dual circuit relay valve. The HCU is mounted to the vehicle frame rail with two brackets. Figure 1.4.

- Two pump motors draw brake fluid from the reservoir to pressurize the accumulators. The motors are not serviceable.
- Two gas-filled hydraulic accumulators store energy supplied by the pumps. Accumulators are sealed at the factory and are non-refillable. Accumulators may be replaced without replacing the entire HCU.
- The ECU processes sensor signals and generates solenoid valve commands to reduce, maintain or increase brake pressure for control function. The ECU constantly monitors the pressure in the accumulators, using one pressure sensor per brake circuit. The ECU may be replaced without replacing the complete HCU.
- The optional pressure supply valve controls the Spring-Applied/ Hydraulic Released (SAHR) parking brake. The pressure supply valve is mounted on the HCU behind the accumulator. The pressure supply valve may be replaced without replacing the entire HCU.
- The dual circuit HCU reservoir holds the hydraulic brake fluid. The reservoir may be replaced without replacing the entire HCU.

HYDRAULIC POWER BRAKE (HPB) COMPONENTS

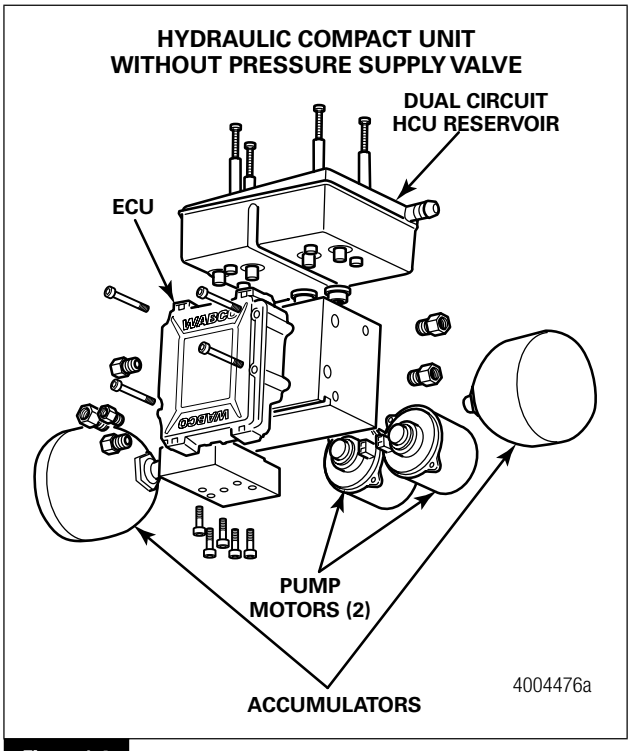

Figure 1.4

Master Cylinder Assembly

The dual circuit master cylinder with an integrated relay valve provides the translation of brake pedal force into hydraulic braking pressure, and sends the driver's demand signal to the HCU. Figure 1.5.

- The foot brake switch provides brake status to the ECU and eliminates the need for a brake light switch.
- The master cylinder reservoir holds the hydraulic brake fluid.
- The fluid sensor switch monitors fluid level in the master cylinder reservoir.
- The master cylinder reservoir and both switches may be replaced without replacing the entire master cylinder.
- The master cylinder cap provided by Meritor WABCO contains a special gore material that allows the reservoir to breathe, and serves as a filter to help prevent contaminants from getting into the reservoir. This is the only cap approved for use with Meritor WABCO HPB. Replacement caps may be obtained from Meritor WABCO.

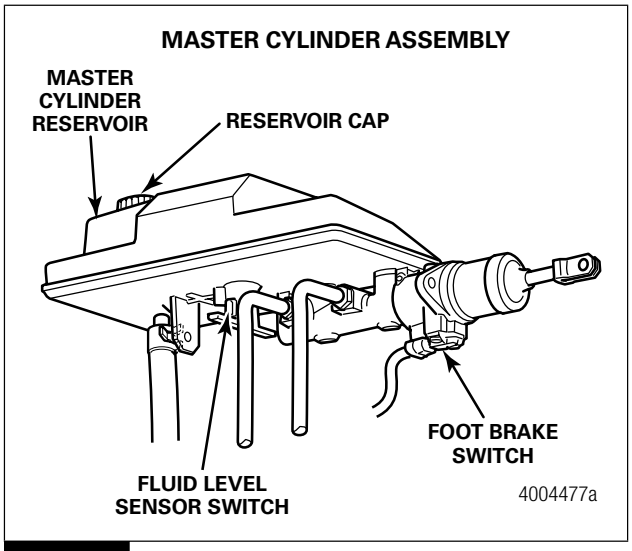

Figure 1.5

Wheel-End Sensors

A Meritor WABCO wheel-end sensor is installed at each wheel whose speed is to be monitored. These sensors generate electronic signals which are sent to the ECU. A sensor spring clip holds the wheel speed sensor in place. Figure 1.6. The sensor and sensor clip must be lubricated before installation and whenever wheel-end maintenance is performed.

TOOLBOX™ Software

TOOLBOX™ Software is a PC-based diagnostics program required to diagnose HPB system faults. For HPB, version 5.0 or higher is required. The program runs in Windows® 98 or higher. TOOLBOX™ is available from SPX Service Solutions, 1-800-328-6657. Figure 1.7.

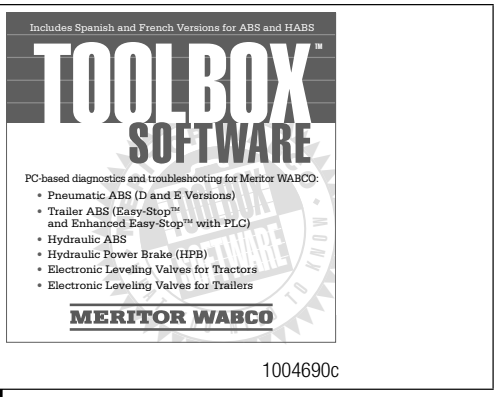

Figure 1.7

Low Pressure Hose

This manual contains service information for a low pressure hose which is not produced by Meritor WABCO but is an integral part of the HPB system.

How the HPB System Works

Meritor WABCO's hydraulic power braking system provides the energy required to actuate the brakes and control the electronic brake force distribution (EBD), ABS and ATC functions. The HCU is activated each time the ignition is turned on or whenever the driver steps on the brake pedal. If the system is equipped with the optional power park brake, the HCU also supplies the energy to release and control the service and park brakes.

The Meritor WABCO HPB system for trucks is illustrated in Figure 1.8. A complete HPB system layout, with hydraulic brake lines, appears in the Appendix.

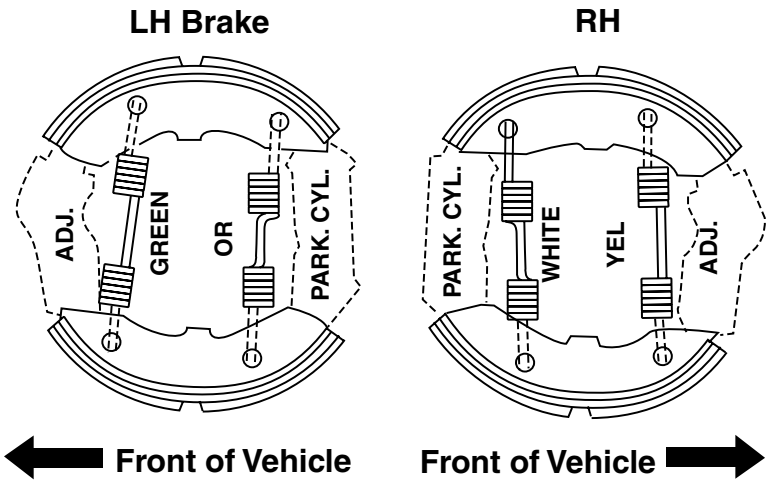
Heavy-Duty Return Spring Kits



The springs on Lucas brakes have been redesigned and new spring kits created. The new springs simultaneously adjust the top and bottom during forward stops of the vehicle . Previously, the bottom shoe adjusted during forward stops and the top shoe during reverse stops.

The top and bottom shoe adjustment during forward stops is accomplished by different spring tensions between the two springs on each brake.

Initially, the new spring kits must be installed in Axle Sets (LH & RH wheels) in order to prevent automatic brake adjustment imbalance.

These new springs are being introduced as a running interchangeable change.

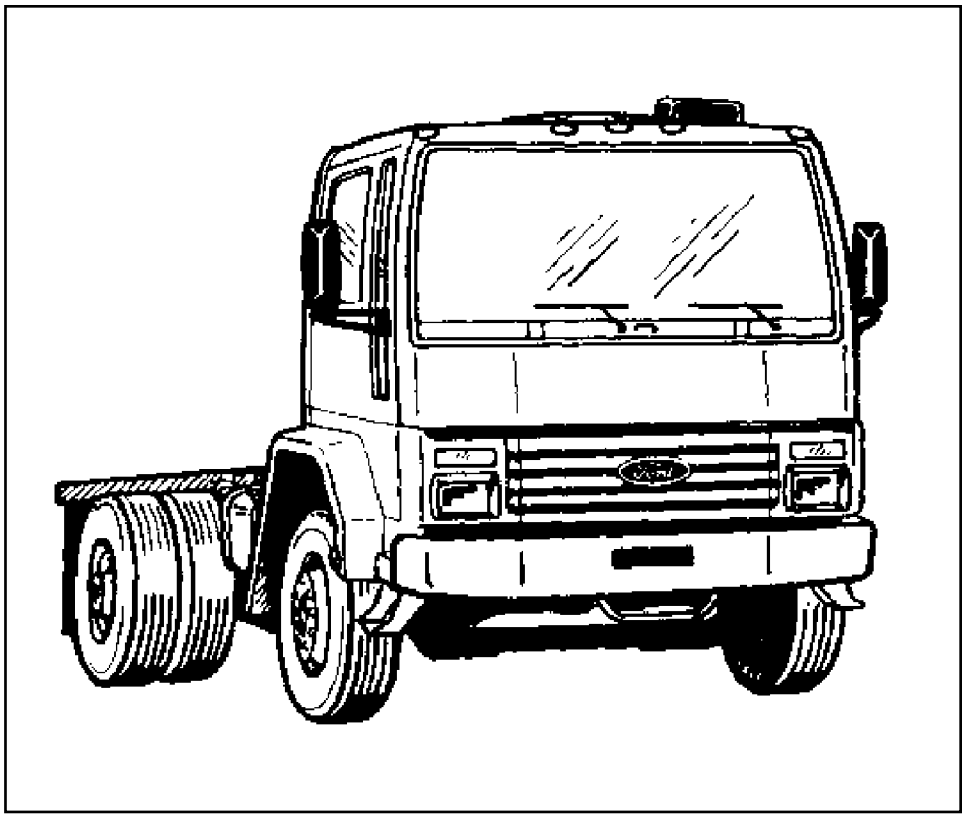
FORD CARGO FRONT DISC BRAKE



CF SERIES

Built in Sao Paulo, Brazil by Autolatina, the Brazilian joint venture between Volkswagen and Ford Motor Company. Was introduced into the United States in the Fall of 1985.

In 1991, Ford stopped importing the Cargo from Brazil and began building it in Louisville, Kentucky along with other model Ford trucks. Louisville Ford Cargos use Rockwell Air Brakes and Lucas Hydraulic Brakes.

The springs on the A2LS brakes have been redesigned and new spring kits created. The new springs simultaneously adjust the top and bottom during forward stops of the vehicle . Previously, the bottom shoe adjusted during forward stops and the top shoe during reverse stops. The top and bottom shoe adjustment during forward stops is accomplished by different spring tensions between the two springs on each brake. ***Initially, the new spring kits must be installed in Axle Sets (LH & RH wheels) in order to prevent automatic brake adjustment imbalance.***	**R407969** Complete axle kit includes both SP7896S & SP7987S **LH** **RH**  Front of Vehicle Front of Vehicle

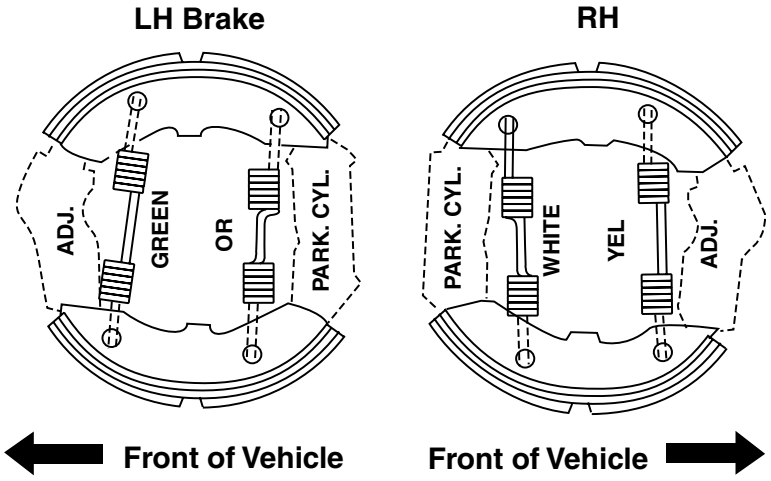
Heavy-Duty Return Spring Kits



The springs on Lucas brakes have been redesigned and new spring kits created. The new springs simultaneously adjust the top and bottom during forward stops of the vehicle . Previously, the bottom shoe adjusted during forward stops and the top shoe during reverse stops.

The top and bottom shoe adjustment during forward stops is accomplished by different spring tensions between the two springs on each brake.

Initially, the new spring kits must be installed in Axle Sets (LH & RH wheels) in order to prevent automatic brake adjustment imbalance.

These new springs are being introduced as a running interchangeable change.

Hazard Alert Messages

Read and observe all Warning and Caution hazard alert messages in this publication. They provide information that can help prevent serious personal injury, damage to components, or both.

⚠ WARNING

To prevent serious eye injury, always wear safe eye protection when you perform vehicle maintenance or service.

Park the vehicle on a level surface. Block the wheels to prevent the vehicle from moving. Support the vehicle with safety stands. Do not work under a vehicle supported only by jacks. Jacks can slip and fall over. Serious personal injury and damage to components can result.

⚠ ASBESTOS AND NON-ASBESTOS FIBERS WARNING

Some brake linings contain asbestos fibers, a cancer and lung disease hazard. Some brake linings contain non-asbestos fibers, whose long-term effects to health are unknown. You must use caution when you handle both asbestos and non-asbestos materials.

How to Obtain Kits

Kit R40H8203

Part	Quantity
Shims — 0.025″ (0.635 mm) Thick	2
Shims — 0.045″ (1.143 mm) Thick	2
Support Keys	2
Support Springs	2

Determine if Shims are Required

1. Wear safe eye protection.
2. Park the vehicle on a level surface. Block the wheels to prevent the vehicle from moving.
3. Remove the caliper assembly from the anchor plate. Remove the key retention bolt. Then tap out the key and spring.
4. Use a wire brush to clean the v-way surfaces of the caliper and anchor plate. File any deep nicks or gouges smooth.
5. Lay a straightedge across the caliper v-way surfaces. Use a feeler gauge to measure the gap.
   - **If the gap depth is 0.050-inch (1.27 mm) or more:** Replace the caliper. Figure 1.

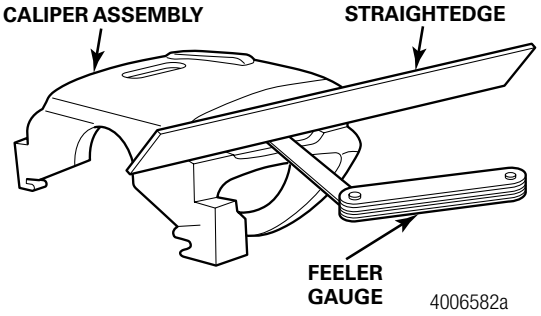

Figure 1

6. Install the caliper back into the anchor plate. Install a new production key and bolt, but do not install the support spring at this time.
7. Insert a screwdriver into the center of the key-to-bumper gap. Pry firmly to ensure the caliper is seated against the three slide surfaces "A", "B" and "D". Figure 2.

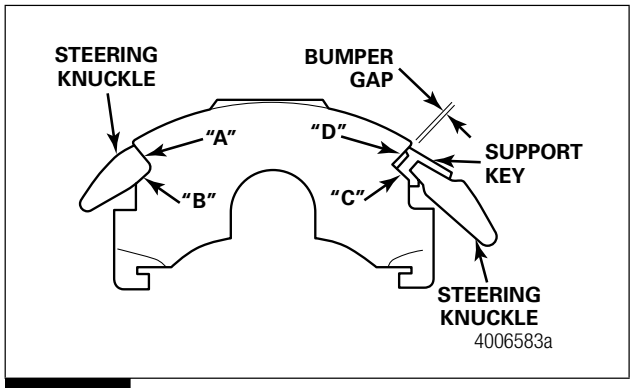

Figure 2

8. Measure the bumper gap. Use the largest feeler gauge or stack of gauges that will fit into the gap on either side of the screwdriver. Figure 2.
9. Use the bumper gap measurement to select a shim according to the table.
   - **If the bumper gap exceeds 0.145-inch (3.683 mm):** Replace the old caliper with a new caliper and remeasure the bumper gap.
   - **If the bumper gap with the new caliper is between 0.058-inch (1.473 mm) and 0.145-inch (3.683 mm):** Select a shim from the table.
   - **If the bumper gap with the new caliper exceeds 0.145-inch (3.683 mm):** Replace the anchor plate also. Use a new key and spring when assembling the new components.

Gap Size	Shim Thickness
0-0.058″ (0-1.473 mm)	None required
0.058-0.101″ (1.473-2.565 mm)	0.025″ (0.635 mm)
0.101-0.145″ (2.565-3.683 mm)	0.045″ (1.143 mm)
0.145″ (3.683 mm)	Refer to Step 9.

Install the Shim

1. Remove the caliper assembly from the anchor plate. Install the selected shim on the anchor plate v-way opposite the key and spring v-way. Figure 3.

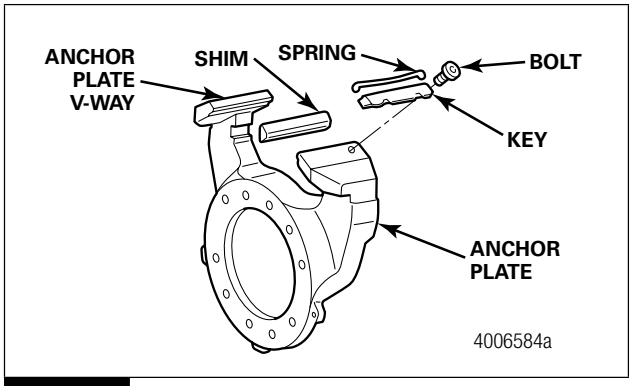

Figure 3

2. With the shim in place on the anchor plate v-way, reinstall the caliper assembly with a new key and spring.
3. Measure the bumper gap as described in Steps 7 and 8. If the gap exceeds 0.058-inch (1.473 mm), install a thicker shim or replace components as described in Step 9.

⚠ CAUTION

Set the caliper on the suspension or support it with a length of strong wire. Do not let the caliper hang from the hydraulic hose. Damage to components can result.

4. Lift the caliper up and off the support. Set the caliper on the suspension or support it with a length of strong wire. Do not let the caliper hang from the hydraulic hose.
5. Use a wire brush to clean the support rails and rail surfaces on the caliper.
6. Reinstall the caliper on the support.
7. Reinstall the spring and retainer.
8. With the caliper assembled on the support, place a screwdriver or other suitable tool between the rotor vanes. Rotate the wheel by hand FORWARD to position the forward support rail in full contact with the caliper support rail surfaces.
9. Use a feeler gauge to measure the gap.
   - **If the measurement is 0.010-0.035-inch (0.254-0.889 mm):** The gap is within specifications and no shims are required.
   - **If the measurement is greater than 0.035-inch (0.889 mm):** Select an appropriate size shim from the following table to achieve a gap within specifications. Do not use a shim thickness that will result in a gap that is less than 0.010-inch (0.254 mm).
   - **If the gap is greater than 0.115-inch (2.921 mm):** Replace the support.

Gap "B" Measurement	Shim ID

0.096-0.115″ (2.438-2.921 mm)	685

*Number 682 is the thinnest shim and will not have the part number stamped on its surface.

Install the Shim

1. Remove the spring, retainer and bolt.
2. Lift the forward end of the caliper enough to provide clearance between the caliper and the support rail to allow installation of the shim. The widest side of the shim is to fit up against the widest surface of the support rail. Figure 2.

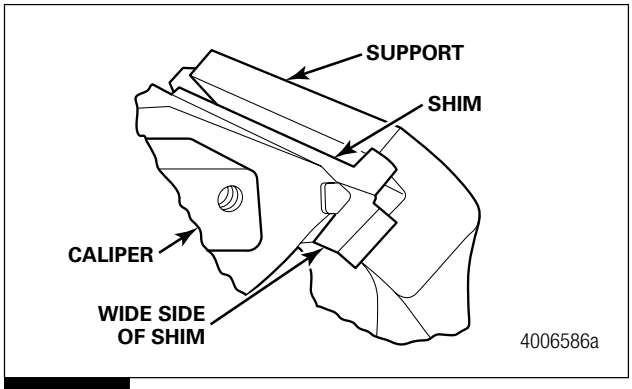

Figure 2

3. Use disc brake grease recommended by Meritor to lubricate the support rail surface on the caliper that will contact the shim.
4. With the shim installed, return the caliper to its original position on the support. Install the new spring and new retainer provided in Kit R40H5664. Install a new bolt.
5. Measure the gap to ensure it is within 0.010-0.035-inch (0.254-0.889 mm). If the gap is not within specifications, repeat the steps for installing shims with the next thicker shim.

12. Use a feeler gauge to measure the gap at "A".
    - **If the measurement is within 0.005-0.035-inch (0.127-0.889 mm):** The gap is within specifications and no shims are required.
    - **If the measurement is 0.036-inch (0.914 mm) or greater:** Select an appropriate size shim from the table to achieve a gap as close as possible to 0.005-inch (0.127 mm).
    - **If the gap is greater than 0.130-inch (3.302 mm):** Replace the support.

Gap "A" Measurement	Shim Number

Install the Shim

1. Remove the retainer.

⚠ CAUTION

Set the caliper on the suspension or support it with a length of strong wire. Do not let the caliper hang from the hydraulic hose. Damage to components can result.

2. Lift the caliper up and off the support rail. Set the caliper on the suspension or support it with a length of strong wire. Do not let the caliper hang from the hydraulic hose.
3. Lubricate the rail surfaces of the caliper with grease approved by Meritor for disc brake applications.
4. With the shim installed, return the caliper to its original position on the support. Install a new retainer and a new bolt provided in Kit R404151706. Figure 2.

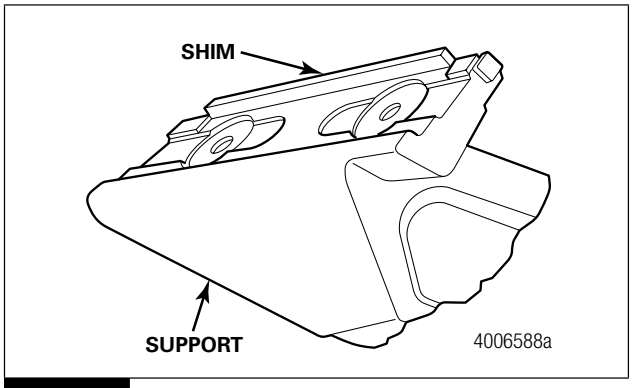

Figure 2

5. Measure the gap at "A" between the retainer and caliper rail to ensure the gap is not less than 0.005-inch (0.127 mm).
    - **If the gap is greater than 0.035-inch (0.889 mm):** Repeat the shim installation steps with a thicker shim. Do not use a shim thickness that will result in a gap width that is less than the 0.005-inch (0.127 mm) minimum.
6. Install a new spring assembly provided in Kit R404151706. Install a new bolt.
7. If the support is replaced, measure the gap again. Install a shim if the gap exceeds 0.035-inch (0.889 mm).

Note: FMSI 7636D1032 is the same as 7636D769. The lining did not change. While the backing plates are the same dimension, the D1032 plate includes a lug used to attach a squealer tab required by some OEMs. The existing Meritor KIT769 disc pads already meet this requirement.

- Disc Brake

HYDRAULIC DISC BRAKE BUMPER GAP SHIM KITS

Service Procedure and Key Selection Instructions

Wear occurs between the Brake Caliper, Steering Knuckle and Retaining Mechanism on some Bendix and Dayton Disc Brakes. This wear causes excess clearance between the caliper and knuckle slide surface resulting in a noise condition (rattle). Continued operation with this noise can result in loss of the Caliper Retaining Spring causing severe damage to the brakes.

Vehicles which have this caliper rattle condition can be corrected by installing a new oversize retaining key and new style support spring. Use of the new key eliminates the necessity to replace caliper and/or steering knuckle to provide the proper caliper thrust clearances. However, in extreme cases, it will be necessary to replace the caliper and steering knuckle. See instruction sheet for specific installation procedures.

LIGHT-DUTY TRUCK REMANUFACTURED HYDRAULIC DISC BRAKE CALIPERS

Meritor offers a comprehensive line of Remanufactured Calipers for light-duty trucks. A complete listing of these calipers is shown on the following pages.

DRUM & ROTOR MOUNTING TYPES & INSTRUCTIONS

GENERAL DRUM INSTALLATION INSTRUCTIONS

1. Meritor drums are manufactured to standards of concentricity and balance that make further machining at the time of installation unnecessary.
2. The rust preventative colored sealer should be removed from the braking surface by using solvent.
3. It is always necessary to clean hub flange, removing rust and corrosion. If the hub flange is bent, replace the hub.
4. Remove any excessive paint from hub hole in brake drum.
5. Where rivets are used to assemble hub and drum, remove any burrs from the rivet holes in the hub. If flange holes are oversized or elongated, the hub should be replaced.
6. DO NOT USE POWER IMPACT WRENCH UNLESS EQUIPPED WITH TORQUE LIMITING FEATURES.

WARNING:

MANY PARTS THAT SEEM SIMILAR ARE DIFFERENT AND SHOULD *NOT* BE INTERCHANGED.

AGAIN, NOTE THAT THE ILLUSTRATION SECTION OF THIS CATALOG IS NOT TO BE USED TO MAKE PRODUCT SUBSTITUTIONS, BUT TO IDENTIFY CONFIGURATIONS AND APPLICATIONS. SEE DISCLAIMER ON PAGE ii.

TYPE A — REAR AXLE SHAFT FLANGE MOUNTING

These drums are held to rear axle shaft flanges with speednuts, or by hold-down bolts. Drum should come off readily with removal of these fasteners. The studs in the axle shaft flange are not changed.

Finish machining is not required prior to installation.

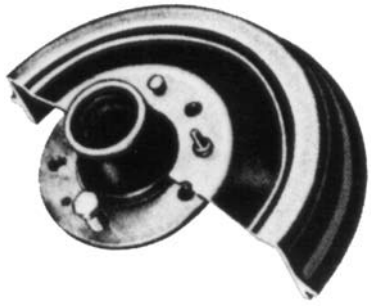
TYPE B — RIVETED TYPE

These hubs and drums are fastened together by means of rivets and a pilot.

Removal and Installation Procedure

1. Cut off the peened heads of the rivets with a cold chisel.
2. Punch or drill out the rest of the rivets and pilot from the hub. Align hub with new drum and assemble with new rivets by inserting the rivets through the proper holes, then peening them over with a hammer. Be certain that the assembly is properly supported to prevent damage to the hub or drum. (If replacement drum does not contain rivet holes, drum is held in place by wheel bolts.)

NOTE: If rivets are not available, 5/16" machine bolts may be substituted for rivets, using 5/16" machine nuts to hold hub and drum assembly securely.



DRUM & ROTOR MOUNTING TYPES & INSTRUCTIONS

TYPE C, D AND E — SWAGED STUD TYPE

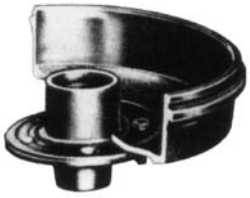
These hub and brake drums are held together with studs that have enlarged shoulders, knurled or swaged to securely hold hub and brake drum together. Easy removal is obtained by using a CARBIDE STUD-OFF CUTTER TOOL. It is essential that this tool removes ALL the swaged portion of the stud shoulder, then old stud can be pressed or driven out without damage to the hub flange or hub holes.

Firmly press new studs into the hub using a STUD GUIDE TOOL which aligns drum on the studs and press into position. After satisfactory contact is made between hub flange and brake drum, swage studs securely with a PEENING PUNCH.

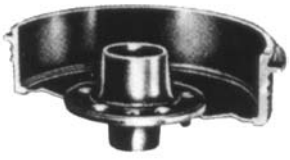
NOTE*: *CHRYSLER PRODUCTS ONLY—TYPE C AND D
The original manufacturer supplies two types of brake drums, the full-cast type (shown in Type "C") and the composite type (shown in Type "D"). When replacing the full-cast type drum (as shown in Type "C"), which is called an INBOARD MOUNTING meaning mounted inside the hub flange, be sure to place the new brake drum OUTBOARD MOUNTED which means outside the hub flange (as shown in Type "D").

When replacing composite type brake drum (Type "D") which is an OUTBOARD MOUNTING (mounted outside of the hub flange), the brake drum is replaced in the same OUTBOARD MOUNTED position (outside the hub flange).

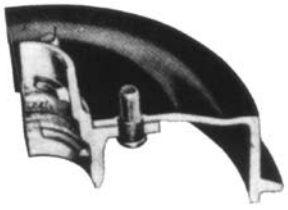
WARNING: DO NOT REUSE OLD STUDS.



TYPE C



TYPE D



TYPE E

TYPE F — CHEVROLET FRONT HUB AND DRUM

Some models of Chevrolet were shipped from the factory with their hubs and drums assembled with rivets. It is necessary to remove these old rivets to disassemble; however, in replacement of these brake drums reriveting is not required. THE STUDS ARE NEVER REMOVED FROM THE HUB. Many later model Chevrolets have hub and drums that use speednut fasteners to hold the hub and drum together. Replacement of these require only speednuts to hold drums in place.

Removal and Installation Procedure

1. Cut off the peened heads of the rivets with a cold chisel. Drive rivet out from assembly with a steel punch. Remove drum by simply pulling the drum away from the studs.
2. Install new drum over old studs and fasten with 3 speednuts making certain they are forced down entire length of studs to make a secure contact against the brake drum. DO NOT REMOVE OLD STUDS FROM THE HUB.

If drum lathe work is required, it is recommended that either of the following two methods be used:

(a) the wheel should be assembled with hub and drum securely fastened with lug nuts, or

(b) lug nuts should be used on the studs without speednuts, turning the nuts all the way down the stud to the brake drum to securely fasten.

One of these two methods is necessary in order to obtain a solid and secure assembly to make for a perfect turning job on the lathe.

TYPE G — UNICAST HUB AND DRUM

This is a unicast hub and drum and in many instances are furnished without bearing cups. Cups, if not supplied, may have to be purchased for installation into drum before installing drum onto vehicle.

Finish machining is not required prior to installation.

DRUM & ROTOR MOUNTING TYPES & INSTRUCTIONS

TYPE H — HUB AND ROTOR ASSEMBLY

This is a two piece assembly consisting of a hub and rotor machined together and permanently held together with hardware (studs). This assembly is never to be disassembled.

If a stud is stripped, replace only one (1) stud. If necessary to replace more than one (1) stud, the entire assembly must be replaced.

Finish machining is not required prior to installation.

TYPE J — UNICAST ROTOR ASSEMBLY

American Made: If more than one stud must be replaced, exercise extreme caution to be certain proper stud is used and that the stud will withstand torque to manufacturer's specifications.

Imported: If stud hole threads are stripped, the entire assembly must be replaced.

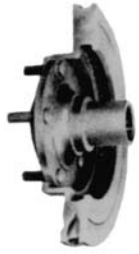
Finish machining is not required prior to installation.

TYPE K — ROTOR ONLY

Rotor is mounted on the outboard side of hub. The rotor is not usually fastened to the hub and should pull free with a minimum of effort after removing caliper. Remove the rotor by sliding it off the hub. Caution should be taken not to damage the threads of the wheel bolts.

Clean hub face thoroughly. Install new rotor on hub in same position as one removed. Be certain that the rotor is perfectly seated on the hub face and that there is not "rocking" before reinstalling wheel and tightening down.

Finish machining is not required prior to installation.



TYPE L — ROTOR ONLY

FIG. A used on U.S. domestic vehicles.
FIG. B used on foreign made vehicles.

The rotor is fastened with hardware (not permanently) to the inboard side of the hub. Remove the hub and rotor as an assembly, being careful not to damage the nut, washer, bearings, etc. Then disassemble the hub from the rotor. Caution should be taken not to damage the threads of the wheel bolts and the assembly bolts.

Clean hub face thoroughly prior to attaching new rotor.

Reassemble rotor to hub by reversing steps required to disassemble old assembly. Be certain that rotor is perfectly seated on hub and that there is no ''rocking" before tightening assembly hardware to vehicle manufacturer's specifications.

Finish machining is not required prior to installation.

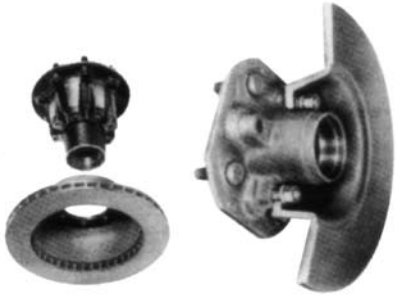


FIG. A **FIG. B**

TYPE M — ROTOR ONLY

Used primarily on American made light-duty trucks and sports utility vehicles.

The Type "M" Rotor is a replacement unit for a rotor which has been attached to the vehicle hub with staked or pressed studs.

Replacement is made by pressing out old studs, disassembling original hub and rotor and reassembling the replacement rotor with the original hub using new wheel studs. Rotor and hub mounting faces should be cleaned thoroughly before reassembly. Detailed instructions for disassembly and reassembly are included with each rotor. These should be followed carefully.

CATALOG ILLUSTRATION DISCLAIMER

The Meritor Product Photo and Illustration Sections are to be used as a supplemental aid in identifying the configurations and specifications of many of the hydraulic brake parts found in this Catalog.

CAUTION

IN NO CASE SHOULD THESE PICTURES & ILLUSTRATIONS BE USED TO MAKE PRODUCT SUBSTITUTIONS. USE THE APPROPRIATE CATALOG APPLICATION DATA TO DETERMINE THE CORRECT PART.

These illustrations are intended to show the configurations of **Meritor parts only**. The outward appearance of these parts may or may not match OEM or competitive parts.

The Photographs and Illustrations shown in this catalog are typical and may vary slightly in detail from actual parts due to manufacturing tolerances, and/or OEM design differences. The general configuration of the part will be the same, i.e. port positions, mounting holes, etc.

Many parts may have the same external dimensions, but have different internal dimensions and/or materials. These differences make it imperative that only the application guide be used to determine the suitability of a particular part.

The Casting Number Indexes and related information shown is to identify general product configurations. Casting numbers will change with different manufacturers. Casting numbers and much of the associated information is shown when available. Although Meritor believes the information contained in the Index to be correct, errors may be present and further investigation may be needed. Meritor cannot and does not assume any responsibility or liability for such errors or harm resulting therefrom.

WARNING
MANY PARTS THAT SEEM SIMILAR ARE DIFFERENT AND SHOULD NOT BE INTERCHANGED.
AGAIN, NOTE THAT THE PHOTO AND ILLUSTRATION SECTION IN THIS CATALOG IS NOT TO BE USED TO MAKE PRODUCT SUBSTITUTIONS, BUT TO IDENTIFY CONFIGURATIONS AND APPLICATIONS.

USE ONLY THE BRAKE FLUID SPECIFIED BY THE VEHICLE MANUFACTURER. DO NOT USE PETROLEUM BASED SOLVENTS OR CLEANERS.

ARVINMERITOR AFTERMARKET PARTS WARRANTY

We warrant all new parts for one year from date of shipment to the buyer against defective material or workmanship (but not against damage caused by accident, abuse or improper installation, maintenance or repair) when such parts are used on vehicles the specifications of which have been approved by our Engineering Department.

As the exclusive remedy under this warranty, we will, at our option, repair or replace such parts free of charge, or take back the nonconforming parts and refund the monies paid by buyer for such parts, if found on examination by us to be nonconforming and if any necessary return charges are prepaid.

If it is necessary to return any parts under this warranty, buyer agrees not to make any deduction on account thereof from remittances on current accounts while claims are in the process of disposition. Any expense incurred without our consent for repairs or replacement will not be allowed.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES OR CONDITIONS, EXPRESS, IMPLIED OR STATUTORY, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR PARTICULAR PURPOSE. IN NO EVENT SHALL SELLER BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY NATURE.

Only genuine ArvinMeritor replacement parts are covered by this aftermarket parts warranty.
