

Hendrickson Air Springs — are integral parts on our line of truck and tractor air suspensions,

providing driver comfort and optimum performance. Regular suspension inspections are necessary to help ensure maximum ride quality and handling. Replacing Hendrickson air springs with non-genuine springs can have a negative impact on suspension performance.

To help ensure high end user satisfaction and peak system performance, Hendrickson supplies the same genuine components for service as were installed in the original suspensions — with the same design, construction, performance and durability.

- Hendrickson air springs are designed and tuned specifically for approved applications.
- Ride quality and performance are key factors when designing the internal makeup of Hendrickson air springs. A low natural frequency is achieved through proprietary piston and bump stop components. Using non-genuine air springs can alter the weight rating and performance of Hendrickson suspensions.

- Hendrickson air springs undergo advanced design and testing processes to provide enhanced suspension ride, handling and performance.
- Look for the Hendrickson name and logo on the air spring to guarantee you are getting genuine Hendrickson service parts.
