#### Helpful hint:

Mirror head diameter and ROC (radius of curvature) help determine field of view coverage and image size provided by the convex mirror. Wide view convex mirrors are typically used for front and rear cross view applications where a wide field of view is desired. Standard convex mirrors are used for viewing targeted blind spots or passing lanes around the vehicle

5" and 6" diameter

## FORD & GM 2020 VAN AND CAB CHASSIS MIRRORS

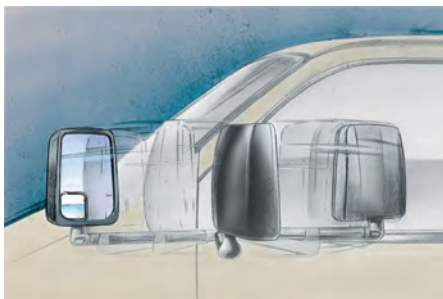

- Velvac's 2020 and 2020XG family of mirrors feature OE fit and styling, and provide outstanding visibility of passing lanes and blind spots around the vehicle, making them the industry standard for wide body cutaway van and truck cab chassis applications. These mirrors mount directly to the OE sail area on the door for clean and easy installation. The modular design allows a single mirror style to be used across multiple van and truck platforms, making them perfect for all OE and fleet applications. In addition to the original 2020 mirrors, Velvac now offers a new 2020 Mini-LEM system with integrated camera options and our new 2020XG, the next generation in wide body mirror technology

### Model 2020 Mirror System

- Model 2020 mirrors are designed specifically for wide body applications such as high cube cutaway vans, rental trucks, Class C RV's and ambulances. The fixed length arms are designed to position the mirror beyond the body providing the driver with an unobstructed view of blind spots and passing lanes around the vehicle. These versatile mirrors are available in several body widths and finishes as well as manual or heated remote glass
- Mirrors available for 86", 96" and 102" wide bodies
- Die cast arms and bases are e-coated and powder coated for corrosion resistance
- Available in black, white and black base/arm with chrome head
- Two mirror head options:
  - Standard head with lower wedge convex
  - Deluxe head with full width lower convex
- Fold away feature allows mirrors to fold forward and back for easy vehicle storage and protection against impact

### Model 2020 Mini-LEM Mirror System

- Velvac has added the exclusive pre-positioned lower camera option to the 2020 mirror, providing even greater coverage of the blind spot areas around the vehicle. These mirrors are available with either a black and white CCD camera or the featured CMOS color camera for even greater clarity and object detection
- Camera image is reversed to provide a picture in the same orientation as the mirror image for seamless observation of blind spots and passing lanes
- CMOS color camera with infrared LED's provide greater image definition, truer colors and anti-blooming technology, allowing drivers to quickly identify objects in a variety of light conditions
- Systems can be designed to integrate with back-up cameras for complete vehicle blind spot coverage. See [Vision Systems](#) section for more information on Velvac's back-up cameras and CMOS camera technology

## FORD & GM 2020XG VAN AND CAB CHASSIS MIRRORS

### Model 2020XG Mirror Systems

- A combination of styling, quality and performance make the 2020XG the new benchmark for wide body mirror systems. The fully integrated arm, base and mirror head look stylish, and together reduce vibration and provide large, clear views of the blind spots and passing lanes. Since these mirrors are designed specifically for 96" and 102" wide bodies, they provide a complete vision solution with no compromising

### Style/Value

- Fully integrated base, arm and mirror head for a clean OE look
- "Swept back" design prepositions the mirror in the optimal location; no head adjustment necessary
- Stylized mirror base fits directly in the OE "sail area" mounting holes
- Rigid design for better stability and image clarity
- Easily replaceable mirror head, glass and arm components help reduce downtime and service costs

### Quality

- Die cast aluminum mounting base and upper arm are e-coated and powder coated for corrosion protection
- OEM-approved plastic mirror shell and lower arm deliver durability and UV resistance
- Pivot system allows the mirror to be folded forward or back upon impact and returned easily to the normal driving position

### Increased safety

- Advanced vibration dampening in mirror head keeps image steady even on rough road surfaces
- 63 sq. in. flat glass and 29½ sq. in. convex glass with 18" ROC provides great visibility of the passing lanes and blind spots around the vehicle

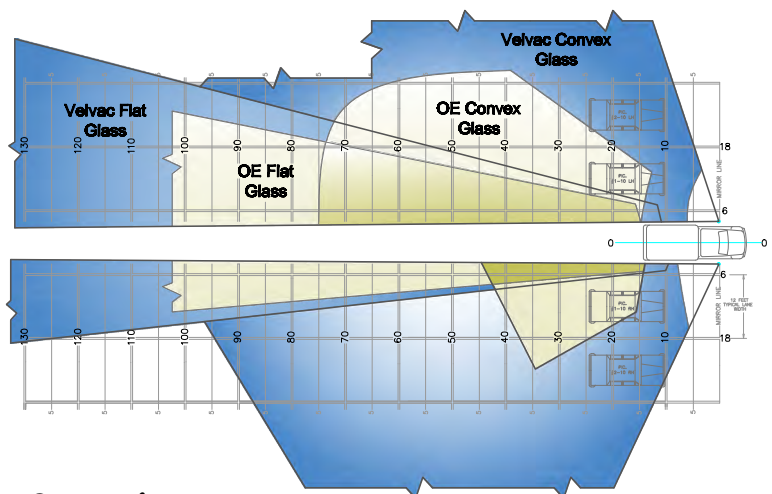

### Field of View Coverage

- Field of view diagram below shows the superior vision and blind spot coverage provided by Velvac 2020 and 2020XG mirrors relative to typical OE mirrors used on a wide body applications. Velvac's 2020 and 2020XG mirrors can help to reduce blind spots and provide visibility of multiple passing lanes around the vehicle leading to better driving decisions and the reduction of costly accidents

### Helpful hint:

Most cutaway van and cab chassis OE mirrors are not designed for body widths that extend beyond 96 & 102 inches. Misuse of these narrow OE mirrors leads to obstructed views and dangerous blind spots and may not fully meet all DOT mirror requirements based on these applications. Be confident that your wide body vehicle meets or exceeds FMVSS 111 requirements for Rear View Mirrors with Velvac's mirrors

### Aero Cam Vision System

- Blind spot elimination system for heavy duty trucks
- The Velvac Aero Cam is a camera-based vision system that provides the driver with clear views of blind spots and passing lanes around the vehicle, resulting in improved safety and reduced potential for costly and dangerous accidents
- According to National Highway Transportation Safety Administration (NHTSA), depth perception and object recognition are the keys to safe vehicle operation. With an optimal 65° viewing angle, CMOS vision processor and camera positioned above the splash zone, the Aero Cam system clearly displays the most critical vision targets, allowing the driver to make faster and safer driving decisions. With its smaller profile in relation to conventional convex mirrors, the Aero Cam is also designed to reduce drag, resulting in improved vehicle aerodynamics, a major contributor to improving fuel economy and reducing fuel consumption

**Aero Cam Optimized  
65° Horizontal FOV**

Custom kits for PACCAR and Volvo vehicles are designed for specific hood geometry and wire routing

1" OD stainless steel tubing arm can be rotated for fine camera angle adjustment. Also rotates upon impact to reduce the potential damage

Available with right side and left side dedicated dash mounted monitors as shown above

## TERMINALS AND CONNECTORS

### Crimp Terminals and Connectors

- One-piece construction assures maximum electrical conductivity
- Electro bright, tin-plated annealed copper construction for maximum corrosion resistance
- Injection-molded insulation allows a funnel barrel construction for easy installation and ensures a consistent wall thickness for maximum reliability after crimping
- Crimp ridge on each terminal for positive location of crimp tool on terminal barrel means fewer mis-crimps
- Open end terminal design permits easy inspection of wire
- Designed to withstand temps of -40° to +221°F (+105°C)
- Heat-shrink tubing and electrical tape available and sold separately (see pages E32, E33 and E36)

**Velvac offers a wide variety of terminals and connectors. For the same application the following terminals may be available: crimp, crimp and seal, crimp/solder/seal, snap or heatless connectors**

### Crimp and Seal Terminals and Connectors

Simple three step installation reduces wiring time and costs

- Heat-shrink terminals combine color-coded, heat-shrink tubing with one-piece solderless terminals to produce fast, watertight, corrosion resistance cutwire connections
- UL approved
- Improved mechanical performance provides improved pull-out strength and strain relief
- Designed to withstand temperatures of -67°F (-55°C) to +221°F (+150°C)
- Electrical tape and heat gun available and sold separately (see page E36)
- Resist abrasion, scoring, cut-through and the effects of long term aging

STEP 1: STRIP copper wire

STEP 2: INSERT wire into sealing gel. Rotate to coat wire

STEP 3: RE-INSERT wire until insulation contacts connector. CRIMP connector

### Crimp/Solder/Seal Terminals and Connectors

- Pre-inserted solder terminals reduce installation time and increase efficiency, while achieving the benefits of both crimp terminals and solder terminals
- Each terminal contains solder for increased strength and conductivity
- Adhesive-lined heat shrink tubing seals out moisture and contaminants
- Wire gauge is printed on each connector for easy ID

### Heatless Terminals and Connectors-Revolutionary New Product

- A heatless, solder-less terminal utilizing a revolutionary anaerobic sealing technology requires NO HEAT
- Simply strip the wire and crimp, activating the sealant that reacts when the copper wire is inserted into the connector to create an environmentally sealed connection
- Easily installs in a fraction of the time of comparable heat seal connectors

- Prevents the ingress of moisture and air that can result in corrosion
- Nylon insulation provides maximum abrasion and puncture resistance while remaining seamless
- Reduces overall installation costs by eliminating the need for torches or heat guns, reducing the installation time and improving productivity
