AVOID COMMON ENGINE HEATER INSTALLATION MISTAKES:

Do not use an engine heater when using 100% antifreeze.

A 50/50 mixture is recommended. Using a mixture that is richer than 65% will cause the element to fail prematurely.

Do not run your engine while the engine heater is plugged in.

This will create an air bubble around the element which will then cause the element to burn out prematurely.

Do not plug in your engine heater prior to installing to "see if it works".

Without being submerged in liquid, the heat generated has nowhere to go and could result in serious burns.

How to safely test a heater.

Connect a multi-meter to the heater pins. A reading between 5 ohms and 100 ohms indicates that the heater is working correctly.

Do not use petroleum based lubricants on the O-ring.

A petroleum based lubricant will significantly reduce the life of the O-ring. Use antifreeze instead.

Do not over tighten the heater.

The O-ring will form an adequate seal when the heater is torqued to the specifications in the instructions. Over tightening will strip the screw threads and reduce the quality of the seal.

After heater use, disconnect the extension cord from the heater cord by firmly grasping each plug and pulling in opposite directions.

Only grasp the plugs. Do not grasp, pull, yank or snap the cords to disconnect power. Damage will result to the power cord connections which could result in permanent malfunction and even an electrical short.

Agricultural, Heavy Duty, Off Road & Industrial Applications

THREADED OIL PAN HEATERS (STAINLESS)

OIL HEATERS:

- Easy to spec: Not engine model specific!
- 10 watts of power per quart of oil
- Keeps oil warm and free flowing for instant lubrication
- Stainless steel low watt density heating elements for long life in oil and hydraulic fluid applications
- Can be used in oil pans, transmissions, hydraulic systems, etc.

For oil heater selection, measure space and determine threading at installation location.

Note: To prevent potential damage to heater and fluid, oil pan heaters should only be used to keep warm oil warm. Do not use with cold oil.

See page 93-94 for replacement cordset information

All 120V Immersion heaters CSA approved

Accessory: 8602824

1/2" NPT Adapter Bushing (1" outside diameter). For use on steel pans only. 1/2" NPT oil pan heaters are supplied with weld or braze-in adapter.

A Note About Extension Cord Selection and Usage:

When using an extension cord with one or more heating devices, it is important that the TOTAL current draw of all devices not exceed the capacity of the extension cord or the AC circuit. Use only 3-wire GROUNDED extension cords. Ground Fault Interrupter (GFI) service is also recommended. See page 4 for more information on proper cord length and gauge.

All circulation heaters on pages 87-90 are equipped with different male plugs depending on the wattage and voltage requirements of the heater. This diagram shows the plug configuration for the three wattage/voltage combinations that are used. Vehicles with heater hose connected to radiator cannot use circulation type heaters.

If your engine is not under "Specific Applications", then choose a kit based on the engine size.

(A) – Air-to-air aftercooled engines (ATAAC) generally will use an 8202982 atomizer installed in pipe between discharge side of aftercooler and engine manifold.

(B) – Use 8202966 if installed in blower box or manifold.

(C) – Use 8202982 if installed in air intake horn.

(D) – Mini ether system (#8200001) may be used for this application.

Note: All starting fluid kits, except mini-ether kits, use starting fluid cylinder #8200327 (not included).

All kits, except for #8203237 require atomizer. See following page for atomizer information.
